

## Compact dust filter units

Systems with compact, often complicated, constructions that use needle felt as the primary filter medium are commonly used to filter particles and dust from exhaust gases and ventilation air from industrial processes.

*TP-Filter* manufactures the majority of such types and can frequently provide improved function and length of life through the right choice of materials and better construction and reinforcement. This is even true for special cases that require protection from damp and oily environments, high temperatures, static electricity or hot sparks.

We also supply inserts and baskets, coated or in stainless steel, mounted if desired and ready for use in the intended equipment.

Naturally, all our products are carefully marked to allow good evaluation and follow-ups.
