

An even tighter seal with the innovation that makes a virtue of spills

Gaskets of our self-sealing type are replacing expensive, leaking rubber gaskets in the paper industry and other sectors with high functional requirements.

The 'furry' surface captures fibres and particles, which means that the gasket quickly stops leaks due to scratches, gaps or other defects.

The gasket is made of special polypropylene material, 5 mm thick. The product is punched out according to the customer's wishes and can then be used at working temperatures of up to 95°C with chemicals and pH values of 0–14.

To further simplify fitting in machines, gaskets with self-adhesive tape can also be supplied. This keeps assembly costs down while also reducing the risk of dropping the gasket during installation.
