

SmartScreen HDF filter panels

TP-Filter offers replacement filter panels for drum filter equipment used in *aquaculture, fresh water, waste water and process water microfiltration*.

The filter panels general construction is a fine *precision* filter mesh fastened to a light and flexible plastic grid. The filter panels are delivered complete with *original quality* filter mesh and edges secured with reinforced tape.

The *SmartScreen* filter panel concept includes the full range of mesh types and mesh openings normally used, typically 10-1000 microns. Careful marking with article and batch numbers means that it is easy to follow up on the performance of a *SmartScreen* filter panel!
