

"the aesthetic alternative"

Listen, here's a product that speaks for itself

Whenever a part is visible – for example when it comes to mesh for cellular phone applications – the winning solution is often to let the mesh be a part of the design.

Soundmesh® Chrome not only features extraordinary finish. It is acoustically transparent, to suit diverse sound equipment and it has a design that allows a stock protective mesh applied behind for protection. All in all this is an attractive alternative to aluminized materials.

TP-Filter is a technology leader with more than 20 years of experience in developing and constructing a broad range of filter products. We continuously synchronise materials, details and design in accordance with our industrial customers reality.
