

Soundmesh® Metal Imitations

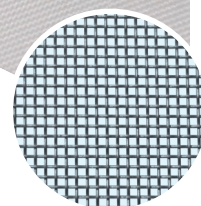

IT & Komponenter

"the non conductive alternative"

Looks metal. Plays metal. But it ain't metal.

Are you looking for aesthetic visible mesh to cover loudspeakers or microphones? Keep the attractive metal look, without the disadvantages of a conductive material. Our advanced pigmentation technology gives a metal finish to a non conductive syntethic mesh. This means you don't need to adapt transceiver antenna or risc metal scrapings which can harm electronic parts. The design allows a stock protective mesh applied behind for protection. *Soundmesh® Metal Imitations* is acoustically transparent, to suit mobile phones and diverse sound equipment.

TP-Filter is a technology leader with more than 20 years of experience in developing and constructing a broad range of filter products. We continously synchronise materials, details and design in accordance with our industrial customers reality.
